TREATED WOOD TIMBER

KNC Treated Wood

All treated pine supplied by KNC Facade is sourced from our head office in Northland, New Zealand from sustainably managed rotational plantations that are FSC or PEFC certified. This ensures that all timber products are sourced from renewable and sustainable forests.

Compliance and quality are at the heart of North Sawn Lumber's business, with independent third party audits of all manufacturing processes, KNC Facade ensures that customers are provided with imported timber products that are fit for purpose.

With full control of the manufacturing process from log to customer, KNC Facade ensures consistency in quality and specifications.

SUSTAINABILITY

Our Radiata Pine timber is sourced from FSC-certified, sustainably managed forests, ensuring responsible harvesting. We go beyond industry standards with our environmentally friendly practices, from using biofuels in our kiln drying facility to minimizing waste and carbon emissions across our operations.

A pioneer in eco-conscious wood treatment, North Sawn Lumber was the first in New Zealand to offer MCA (Green Guard Certified Trace Isomers) and is now leading the market with Protim Micro—an advanced, heavy metal-free solution for sustainable wood. Their state-of-the-art treatment plants exceed environmental regulations, prevent pollution, and promote a cleaner future.

The supplier operates with a zero-waste mindset, recycling by-products into biofuel and reusing wood chips and sawdust for community use. Even their rainwater is collected and reused to maximize efficiency. Every step of the supplier's process is independently audited, ensuring we meet and exceed sustainability standards.

The appearance of treated Radiata pine makes it an ideal material for interior and exterior design

Our company specializes in providing imported treated Radiata pine products with many different processing categories and sizes

CLASSIFICATION DETAILS

- H1: Interior finishing timber
- H2: Wall framing
- H3: Plywood, Laminated posts/beams
